---

### Changing Recipient Mail Server IP

- » Select "**Inbound Routing**" from the service settings tab on the left navigation
- » Click "**Add Site**" located toward the bottom right of the screen
- » Enter the required information for your mail server.
- » Select the "**Domain List**" from the Domains tab on the left navigation
- » Click on the **settings** icon (the middle icon that looks like three sliders).
- » Click on the drop down selection to the right of "**Route mail to**".
- » Select the **Route** that you added in step 3 above.
- » Click **Save**.
- » You should see a confirmation in the top right of the screen.
