

CYBER SECURITY, EVOLVED

EdgeWave ePrism Email Security

EdgeWave Email Security provides unrivalled email defense against internal and external threats such as spam, viruses, spyware, phishing schemes, identity theft, and other dangerous or offensive content. Our services include industry-leading inbound/outbound spam and antivirus filtering, policy categorization and automated seamless directory integration in a hosted SaaS solution that can be provisioned immediately, without having to install any hardware or software. EdgeWave technical experts provide proactive monitoring and management designed to stop threats before they get near your internal servers.

Highlights

Inbound/Outbound Protection – Award-winning Inbound/outbound anti-spam and antivirus, email policy enforcement and TLS encryption as part of our affordable on-demand protection.

No-Touch Email Security – We host the applications and infrastructure required to protect your organization in a fully managed solution requiring zero administration.

Disaster recovery protection – Spools all email for up to 160 hours, in case of unexpected events, so you never lose your business-critical email.

Proactive monitoring – EdgeWave Engineers continually monitor email processes to assure they are performing at peak efficiency.

Zero Minute Defense – This feature assures that as soon as an emerging threat is identified, our engineers deploy a specific rule to block it. No other solution has it.

Features

No-Touch Email Security – We host the applications and infrastructure required to protect your organization in a fully managed solution requiring zero administration. Set-up requires only a simple MX path redirect. Our global data centers provide redundancy and failsafe capabilities so you never have to worry about losing data you might need for legal evidence or regulatory compliance.

Proven Accuracy – In independent studies of email security providers, performed by both Tolly and Miercom, EdgeWave Email Security (formerly, Red Condor) beat the leading contenders in all areas including lowest false positives and negatives, lowest number of misclassifications and highest percentage of blocked spam.

TLS Encryption – Our unique TLS Encryption ensures the complete confidentiality of email communications and their content. It works by establishing private email networks linking you with your business-critical partners via the use of certificates. Every email sent or received by these networks is fully and securely encrypted while the encryption remains completely transparent to both sender and recipient.

Centralized Management Tools – Domain administrators can control policies and access services including email filtering, DLP, Encryptions, Continuity and Archiving from a powerful, central management interface – an intuitive Web dashboard that makes managing messaging security simple. End-users have a personal dashboard that allows each mailbox owner to refine policies and review quarantined spam, and receive a Spam Digest report, providing visibility into the effectiveness of his or her individual filter profile.

Perimeter Defense – Our adaptive threat detection technology provides multi-layered protection, at the perimeter, from denial of service and other email-borne attacks. Merit-based reputation and real-time analysis of evolving email threats combine to stop the most abusive email attacks and block spam campaigns before they get near your network, helping to conserve bandwidth.

Technical Support – EdgeWave's Security Operations Center (SOC) is staffed around the clock with email experts and security specialists for 24/7/365 support. They provide proactive monitoring of any email threats to assure continuous service for all EdgeWave domains and users.

CYBER SECURITY, EVOLVED

EdgeWave ePrism Email Security

Disaster Recovery – Our global data centers provide redundancy and failsafe capabilities, including 160 hours of disaster recovery protection so you don't have to worry about losing data you might need for legal evidence or regulatory compliance. If disaster strikes or unplanned maintenance is required, we continue to accept incoming email and spool your filtered email for later delivery to your mail server.

Comprehensive Reporting – Our email security solutions include sophisticated reporting tools that provide comprehensive data on both inbound and outbound messages to help you review and manage your organization's email filtering. You can generate aggregate reports across your entire organization or drill-down to individual users.

Managed Appliance Option – EdgeWave Email Security is also available in a managed, on-premises appliance that includes optional Vx Technology that switches your email security to our hosted solution in the case of an unforeseen interruption.

Other EdgeWave ePrism Email Security Services

Data Loss Protection

This data protection technology analyzes data being sent out of your network to detect private content in data in motion and prevent sensitive and protected data from leaving your company.

Email Continuity

EdgeWave Email Continuity provides an uninterrupted flow of your email stream in case of unplanned or planned shutdown.

Email Encryption

EdgeWave Email Encryption services assure the secure delivery of your email in accordance with your organization's security policy, and provides confirmation of message delivery. Comprehensive reporting offers message tracking and an audit trail to support regulatory and other requirements.

Email Archive

Our affordable Email Archive retains your email in an unalterable state to help you meet requirements for regulatory compliance, litigation issues and storage management needs.
