---

If you chose a managed plan that includes FTP access, the website files can be uploaded by using the FTP information emailed to you after we completed your hosting setup. You should use an FTP client to perform this operation.

If you chose a managed plan that does not include FTP access, a Webservio engineer will setup your Web site for you.Â

If you have a Do-It-Yourself plan, you can use the Web-based control panel or create FTP access to upload your site files.
