In the SpamWeeder Premium web interface there is a "Report Spam" button. You can upload a spam message on the page to train the spam filter. It is a 'drag n drop' style feature, meaning you can save the spam email to your system, then drag and drop the email into the "Report Spam" area. Note that only emails are accepted that have been processed by the cluster you're reporting to. Currently this method supports .eml and .msg formats.
