Yes. Â Please visit the downloads section of this portal to find the free file. Â The requirements are listed below:

» Supports Microsoft Outlook 2003, 2007, and 2010
» Windows XP (32 bit only), Windows Vista (32 and 64 bit), and Windows 7 (32 and 64 bit)

The first time a search is run, the user is prompted to enter their authentication credentials. Â This authentication process is performed once.

The Outlook Add-in limits the number of search results to 1,000 matches. Â When a search returns more than 1,000 matches, the most recent messages are displayed in top to bottom order within the Archive Search Results folder.

If you need to view an unlimited number of messages, sign into the McAfee Portal and perform the search.
