Use the following port settings when configuring your email account in your email client (Outlook, Thunderbird, etc.) or phone/mobile device.

SSL-based Ports

This is the recommended configuration for Webservio services.

- » SMTP SSL 465
- » POP3 SSL 995
- » IMAP SSL 993

Traditional Ports

- » SMTP 25 (mostly blocked to public network to prevent spammers from sending emails directly with port 26 being used instead)
- » POP3 110
- » IMAP 143
