Webservio is phasing out the OpenSRS system and encourage all our shared hosting and domain registration only customers currently on that system to move to our newer system at services.webservio.net. For a more complete explanation of why, you may view this page: <http://webservio.net/domainservices/disclaimer.html>

To successfully transfer your domain, use the following procedure:

1. Ensure your domain is eligible for transfer by reviewing this article: <http://domains.webservio.net/kb/servlet/KBServlet/faq491.html>
2. Log in to your OpenSRS account at: <https://manage.opensrs.net>
3. Click on Domain Extras.
4. Copy the Domain Authorization Code.
5. Go to <http://services.webservio.net>
6. Click on Transfer Domain.
7. Enter your Domain Name and the Authorization Code.
8. If you already have an account you may login, or create a new account.
9. From this point, the system should guide you through the necessary steps. If you need additional assistance, view this article: <http://domains.webservio.net/kb/servlet/KBServlet/faq553.html>
10. To transfer multiple domains, simply repeat the process above for each domain. If you have many domains to transfer, follow these instructions for bulk transfer: <http://domains.webservio.net/kb/servlet/KBServlet/faq618.html>

***After you place the Transfer Order, the Administrative Contact for the domain will receive an email to authorize the transfer. **It must be approved within 5 days.**
