How to Create SMTP Connector in Exchange 2013/2016

Log into Exchange Administration Center:

» Navigate to Mail Flow
» Select Send Connectors
» Add a new connector (click the + sign)
» Add a relevant name for this connector, Eg: SpamWeederOutFilter
» Select : Internet (For example, to send internet mail)and click Next
» Select Route mail through smart hosts
» Add the SMARTHOST by clicking on the + sign
» Click Save
» Click Next
» If you are using an IP outgoing user leave None / If you are using an Authenticating user select
Basic Authentication > Input the Outgoing User and Password
» Click Next
» *Address space: > Click the + sign and in the *Full Qualified Domain Name (FQDN): input *
» Click Save and Next
» *Source server: - Click on the + sign and select the server from the list
» Click OK and Finish

You need to ensure that the port 587 is being used:
» Open the Exchange Management Shell
» Run the following:

Set-SendConnector -identity "NAME OF CONNECTOR" -Port:587
